DETAILED ACTION

1. This communication is responsive to Amendment filed 05/21/2007.
2. Claims 1-6 are pending in this application. Claim 1 is independent claim. In the Amendment, claims 1-6 are amended. This Office Action is made final.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-6 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-6 cite an apparatus for generating a random number sequence in accordance with a mathematical algorithm. In order for claims to be statutory, claims must either include a practical/physical application or a concrete, useful, and tangible result. However, claims 1-6 merely disclose steps/components for generating a random number sequence by performing series operations without further disclosing a practical/physical application or a useful and tangible result since the claims appear to preempt every substantial practical application of the idea embodied by the claim and there is no cited limitation in the claims that breathes sufficient life and meaning into the preamble so as to limit it to a particular practical application rather than being so broad and sweeping as to cover every substantial practical application of the idea embodied therein. Therefore, claims 1-6 are directed to non-statutory subject matter.

Response to Arguments

5. Applicant's arguments filed 05/21/2007 have been fully considered but they are not persuasive.

a. The applicant argues in pages 9-10 for claims 1-6 rejected under 35 U.S.C. 101 that the claims are directed to statutory subject matter which including a useful, concrete, and tangible result as a random number generation apparatus to produce a random number sequence for which an appearance balance of 1/0 has an equal probability as seen in the claimed invention. Further, the claims subject matter can be used to improve the security of ID passwords and various kinds of encryption keys as a necessary of having equal probability random number.

The examiner respectfully submits that claims 1-6 are not quite directed statutory subject matter since the claims only disclose or cite a random number generator wherein the property of the random number is equal probable of having either 0/1. This equal probable of having either 0/1 is the property of output of the random number generator. It cannot constitute as a practical application of the random number generator. The only direct practical application is to improve the security of ID passwords and various kinds of encryption keys as the random number generator applies to, but the claims fail to incorporate that limitations/practical applications into the claim directly. Thus, claims 1-6 are directed to non-statutory subject matter and rejected under 35 U.S.C. 101.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
